

Abrasion/ Laceration Management

Technician:

Date: Points Points Possible Given

Starts New First Aid Packet report in FastField. Looks up Injury Manager. Verbalizes looking up injury & company Protocols in Drive/FastField. Verbalizes bringing ICE. ***Must be done prior to injury treatment***	1	
Takes or verbalizes PPE precautions	1	
Visualizes injury (may use peroxide/water rinse)	1	
Determines MOI, History of Incident	1	
Assess/Inspect Wound for: -Deformities -Laceration/Abrasion/Avulsion -Hematoma -Foreign Body -Swelling -Redness/ Irritation -Length/Depth -Control bleeding ***If wound is beyond surface tissue and/or bleeding cannot be controlled must contact Injury Manager for possible MD referral. ***	8	
Assess Function: -Range of Motion -Sensory Functions -Level of Pain -Able to Bear Weight -Check Pupils -Check for additional injuries ***Numbness/Tingling, loss of function and non-regular pupil functions require Injury Manager call in for possible MD referral***	6	
Verbalizes injury determination and need for treatment plan.	1	
Places ICE on injury and verbalizes need for 20 minutes of ice.	1	
Gathers employee information for report: -Full name (check ID) -Last 4 of SS/ID# -Employee phone number and supervisor contact information -Age & DOB -Past Medical History -Vitals if warranted -Allergies -Medications -Date of last Tetanus (within 5 years or recommend booster)	9	
Verbalize Injury Manager Call-In Report protocol: -Send text message to Primary call taker -Include your name and type of injury -Picture of injury -Wait 10 Minutes for response -If no response contact Back-Up call taker *Must wait the full 10 minutes* -Verbalize full report and your desired plan of treatment/recommendations ***Contact with Injury Manager must be made prior to any treatment. Rinsing wound to visualize and ICE use does not count as treatment in this sense***	6	
Prepare supplies	1	
Clean wound: -Scrub with Hydrogen Peroxide and Gauze -Remove Foreign Bodies if present -Disinfect with Iodine-Povidone if not allergic -Control bleeding if necessary	4	

*Prepare to close wound: Steri Strips -Ensure area is free of hair (shave if necessary) -Dry wound and skin area again -Choose or cut Steri Strips to appropriate size -Have gauze and glue on standby	4	
*Close Wound: Steri Strip Placement -Place first strip perpendicular to laceration starting in the center pressing down firmly to anchor steri strip, then pull the skin tightly and evenly together. -Continue laceration closure using appropriate number of strips. -Maintain even spacing. -Maintain adequate tension of closure. -Remove and replace new strips as needed to effectively close wound. -Determine need and application of super glue as a bacterial barrier.	6	

Dress closed wound with appropriate bandages ensuring that dressing is effectively secured and consider worker movement/activity.	1	
Aftercare: -Provide and explain ½ sheet instructions to employee and supervisor. -Give employee 1-2 dressing change supplies and advise how/when to use them. -Advise employee and supervisor to call immediately if there are any signs of infection or if the wound gets worse.	3	
Re-check function/movement of wound area and comfort/security of dressings.	1	
Ask if the employee or supervisor have any last questions and obtain employee initials and signature on First Aid Report.	1	
Get supervisor's email address to email Incident Response ½ sheet and Service Record	1	
	Total	57

CRITICAL CRITERIA

- € Failure to verbalize documenting injury on digital FastField report
- € Failure to verbalize importance bringing real ICE
- € Failure to take or verbalize PPE precautions
- € Failure to adequately visualize and assess injury
- € Failure to verbalize contacting Injury Manager PRIOR to injury treatment
- € Failure to thoroughly clean injury
- € Failure to verbalize shaving hair prior to steri strip placement*
- € Demonstrates unacceptable steri strip placement for wound closure*
- € Demonstrates or verbalizes unacceptable crazy glue application*
- € Demonstrates unacceptable dressing application
- € Failure to reassess function and movement of injured area after dressings applied
- € Failure to reassess comfort and security of dressing
- € Failure to explain aftercare instructions to employee and supervisor (ICE & OTC's)
- € Failure to provide aftercare dressing change and instructions ½ sheet
- € Failure to obtain employee signature on FastField report
- € Failure to email supervisor Incident Response Report and Service Record

*Shaded sections are not required for abrasion management skills verification

Must get total of at least 46 points with no marks in the critical criteria to pass for Laceration

Must get total of at least 38 points with no marks in the critical criteria to pass for Abrasion
